ABA therapy uses the science of learning and behavior to increase behaviors that are beneficial and decrease behaviors that limit learning.

ABA THERAPY PROGRAMS HELP WITH:
• Language and communication skills
• Social skills
• Daily living skills
• Academic skills
• Play skills
• Motor skills
• Decreasing problem behaviors

ABA therapy can be implemented in any setting and with any age, one-to-one or in groups.

D.A. BLODGETT – ST. JOHN’S ABA PROGRAM:
• In-home & community-based learning.
• One-on-one treatment by behavior technician’s in the child’s natural environment (where lasting change is the most critical).
• Teams of behavior technicians working with each child to increase generalization of skills.
• Highly individualized goals and objectives.
• Ongoing monitoring of progress by a board certified behavior analyst (BCBA) supervisor including ongoing training and oversight of the behavior technicians.
• Focus on lasting impacts for the child and family.
• Team approach with the family at the center of the team.
